EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gary S. Kindness Reg. No. 22,178 on May 25, 2005.

Please cancel claims 2, 12, and 16-18 and amend claims 1, ~~and~~ ^{and 13} 11, as follow: ^{PN}

1. (Currently amended) A method for dynamically configuring a server computer, comprising:

in response to receiving a request for a resource located at said server computer, analyzing said request for a resource;

based on said analysis, dynamically determining one or more configuration settings from information contained in said request for a resource;

evaluating a configuration rule using said configuration settings to determine whether a said configuration rule is satisfied;

in response to determining that said configuration rule is satisfied, adding one or more configuration settings associated with said configuration rule to said configuration settings to create new configuration settings;

dynamically determining whether an additional configuration rule remains to be tested;

Art Unit: 2143

in response to determining that an additional configuration rule remains to be tested,
_____ (i) _____ evaluating said additional configuration rule with said configuration
settings to determine if said additional configuration rule is satisfied, and
_____ (ii) _____ in response to determining that said additional configuration rule is
satisfied, adding one or more configuration settings associated with said additional configuration
rule to said configuration settings to create modified new configuration settings; and
configuring said server computer based upon said new configuration setting or said
modified new configuration settings.

11. (Currently amended) A computer-controlled apparatus, comprising:

- a central processing unit;
- a memory;
- a network interface;
- a storage device; and
- a global configuration file stored on said storage device comprising one or more configuration rules and one or more configuration settings associated with each configuration rule; and wherein

said central processing unit is operative to execute instructions stored in said memory, which, in response to receiving a request for a resource accessible to said computer-controlled apparatus via said network interface, cause said computer-controlled apparatus to:

- (i) analyze said request for a resource;

Art Unit: 2143

(ii) based on said analysis, dynamically determine one or more configuration settings from information contained in said request for a resource;

(iii) evaluate one of said configuration rules to determine whether said configuration rule is satisfied;

(iv) in response to determining that said configuration rule is satisfied, add said configuration settings associated with said configuration rule to a configuration settings file stored in said memory or on said storage device;

(v) determine whether one of said configuration rules is untriggered;

(vi) in response to determining that one of said configuration rules has not been triggered,

(a) evaluate said untriggered configuration rule to determine if said untriggered configuration rule is satisfied,

(b) in response to determining that said untriggered configuration rule is satisfied, add said configuration settings associated with said untriggered configuration rule to said configuration setting file stored in said memory or on said storage device to create a new configuration settings file; and

(vii) respond to said request for a resource using said configuration settings or said new configuration settings.

Please change the dependency of claim 13 to claim 11. PN.

Examiner's Statement of Reasons for Allowance

2. This office action is in response to an amendment filed on January 18, 2005 and a telephonic interview with Gary S. Kindness on May 25, 2005. Applicant agrees to cancel claims 2, 12, and 16-18, and amends claims 1, and 11. The amendment filed on January 18, 2005 contained claims 1-18 with claims 1, 2, and 11 amended. After the interview, claims remaining are 1, 3-11, and 13-15. Amendment filed on January 18, 2005 and interviewing summary have been entered and made of record.

3. Claims 1, 3-11, and 13-15 are allowed.

4. Claims include limitations that the prior art of record does not appear to teach or render obvious the claimed limitations as recited below.

5. The following is an examiner's statement of reasons for allowance:

The prior art references of record do not teach (alone or in combination) all the limitations together, within the independent claims 1, and 11. For example, the independent claims contain limitations of dynamically determining whether an additional configuration rule remains to be tested, if so evaluating said additional configuration rule with said configuration settings and if additional configuration rule is satisfied adding one or more configuration settings associated with said additional configuration rule to said configuration settings to create modified new configuration settings, and configuring said server computer based upon said new configuration setting or said modified new configuration settings, within the environment of the instant independent claims. Applicants' arguments [pgs. 6-8] have been fully considered and are persuasive to the limitations of claimed over the prior art of record. As shown in the instant

Art Unit: 2143

independent claims and page 9 of Remarks filed on January 18, 2005 and the arguments toward Ludovici reference, the Ludovici reference (alone or in combination) do not disclose or suggest all the limitations within the instant independent claimed invention.

In addition to the updated search Jager U.S. Patent 6,892,231, which recently granted patent to the same assignee with at least one common inventor on May 10, 2005. Jager reference discloses a different method to simplify the server configuration process by flatten the configuration file, the rules in the first block of the configuration file are identify in order to verify the global configuration file which produce a different method from pending application as stated above. Thus, Jager and the instant application's claimed subject matter are distinctly different.

Therefore, the combination of the limitations is allowable subject matter, in light of applicant's enabling portion of the specification as well as their persuasive arguments (see pages 12-14 of the Applicants' specification and pages 6-8 of the Applicants' argument. The independent claims 1 and 11 (and their dependent claims) are allowable, since the claim language discloses this combination of limitations over the prior art of record.
